Insight
& knowledge

Established in 1987, Sunspeed is one of the UK's leading IT relocation specialists. With a state of the art fleet, ranging from small vehicles up to 26 ton rigid vehicles, Sunspeed can provide physical relocation solutions across the spectrum, from moving a single server to the relocation of an entire Data Centre.

Sunspeed seeks to help organisations cut complexity by providing a single point of contact for a variety of technical services, which include; full IT auditing, de/re racking of server equipment, Data Centre cabling, and fully certificated asset recycling.

At Sunspeed, the whole team is committed to the highest levels of customer service and we look to build relationships over the long term. We work with our clients to deliver a highly flexible and bespoke relocation solution that is both efficient and dependable.

Bespoke
& tailored

A Data Centre migration project is a critical and complex business activity which must be approached with the utmost professionalism. At Sunspeed, taking the time to understand your exact requirements is our number one priority and we pride ourselves on our ability to translate your challenges into an effective and safe relocation which minimises disruption and downtime.

SERVER RELOCATION

Whether you are looking to move a single server or an entire Data Centre, you can trust Sunspeed to provide you with the expert assistance you need.

With over 28 years' experience in the industry and some of the world's most reputable clients under our belts, we will provide you with a reliable, flexible and highly-secure service that is completely tailored to your requirements.

DATA CENTRE CABLING

Quality cable management is vital in creating a successful working environment. Sunspeed offers Data Centre cabling solutions to promote business success.

We supply and install power, fibre and data cables in readiness for a server migration and any technical refresh activities. The service is particularly in demand for Data Centre migrations where there are tight migration windows to observe and efficiency is of critical importance.

AUDITING

Sunspeed can help companies understand their IT infrastructure estates in minute detail.

A successful relocation is underpinned by accurate information and good planning. A Sunspeed audit will result in rich, accurate information which we can then use to create a migration plan and our clients can then use in future planning exercises or any technical refresh activities.

ASSET DISPOSAL

If you are replacing your existing IT infrastructure, consolidating assets as part of a wider migration project, or simply have a need to dispose of your redundant hardware, Sunspeed is here to help.

A fully certificated CESG approved asset disposal solution, which can operate both as a standalone service or become part of our Data Centre relocation solution. We can de-rack and collect obsolete equipment for secure disposal in conjunction with your server relocation project for maximum efficiency.

ICT HARDWARE STAGING

Skilled, reliable and professional ICT staging and logistics solutions are the key foundations for flexible and successful hardware delivery and installation services.

Whatever the scope of the project, Sunspeed's skilled and experienced team can deliver. When combined with our delivery and installation service, we will ensure that not only is your build completed on time, but also the hardware is delivered, positioned and installed at your site professionally and within the agreed time frame.

DATA CENTRE MIGRATION CONSULTANCY

Through a trusted network of carefully selected partners, Sunspeed can provide IT Advisory solutions across the spectrum, from helping you to identify the right Data Centre, to connecting you with the right consultants to manage your migration – both from a physical and virtual perspective. Whatever the requirement, we are here to help you find the best possible solution.

"

We have been impressed with the services you offer compared to those companies we have worked with in the past.

HP

Established & trusted

Our History

Established in 1987 by Howard Jermy, when he recognised a gap in the market for transporting and relocating IT equipment, Sunspeed is now recognised as an established leader in computer relocations.

From that small beginning, our customers soon recognised that Sunspeed were going that extra mile with customer service and projects soon progressed to multiple server moves and total Data Centre migrations. Sunspeed continues to be a successful and rapidly expanding company.

Security

We understand that security is of paramount importance in any server relocation project.

At Sunspeed, all operating personal are SC cleared, our vehicles are unliveried and are fitted with multi-level security features and strict security protocols are enforced to ensure the discreet and safe transportation of your servers and your data.

This level of security has seen our service entrusted by some of the world's leading companies including CGI, Oracle Corporation, HSBC, Citigroup, Fujitsu, Chevron, Barclays and the Ministry of Defence (MoD).

No matter what size your server relocation demands are, with Sunspeed your IT equipment is in safe hands.

Our Mission

―――――

Our mission is to deliver the most secure and reliable physical migration solutions in the UK & Europe. We strive to deliver projects of the highest quality by applying technical expertise and sound methodology to mitigate risk, maximise efficiency and minimise down-time.

"

The success Sunspeed has experienced has undoubtedly been as a result of our relocation engineers. Their skill, professionalism, and commitment to customer service has meant clients have been happy to come back time after time. Not only do they work hard, but their experience allows them to be adaptable to situations as they develop, which is something our customers value highly.

FAQ's

What do you move?
We are a specialist IT and server relocation company. So whether you have 2 or 2,000 servers to move, server racks which need relocating, desktop PC's, plotters and printers to migrate as part of an office relocation, or anything else in between which is highly sensitive and of high value, Sunspeed is here to help.

Where do you operate?
We service the whole of the UK and Europe through our dedicated service using our own engineers and vehicles, as well as the rest of the world through a combination of our trusted partner network and our international air freight and packing service, which is tailored to your exact needs.

Will our equipment be insured?
Our Goods in Transit Insurance is one of the most comprehensive policies on the market, made even stronger by a faultless 28 year history. We are able to provide insurance cover up to £3m with no single item limit, at an additional cost. Any relocation, which requires an excess of £3m are subject to underwriter approval.

What steps do you take to minimise any security risks?
All of our relocation engineers have been security cleared to a minimum of SC. All vehicles are unliveried, are GPS tracked, are fitted with panic alarms, and have additional deadlocks and sealed bulkheads. All of our flight cases can be padlocked and sealed with anti-tamper seals. Secure relocations always have a minimum of two men to ensure your equipment is never left unattended.

"

I have used Sunspeed's services for in excess of 15 years, from very small lift and shifts, to a complete Data Centre move, and I cannot fault any of the work that has been achieved. I would strongly recommend Sunspeed.
